

Program		Type of studies (cycle)	Third cycle		
		Name of the program	SEE Doctoral Studies in Mathematical Science		
Course					
Course title		Spectral theory of automorphic forms			
Course code	Semester	Course status	ECTS credits	Contact hours	
	II		10	30	
Teaching staff	Teacher	Prof. dr. Lejla Smajlović			
	Other staff				
Course goals	<p>The main goal of the course is to introduce basic aspects of spectral theory of automorphic forms on Fuchsian groups. To be precise, the goal is to describe spectral expansion of the space of cusp forms and the space of incomplete Eisenstein series and then to derive the Selberg trace formula on non-compact Riemannian surfaces of finite volume. Then, using the trace formula we will introduce the Selberg zeta function and describe its basic properties. As an application of the methods introduced, we will derive the Weyl law for the distribution of eigenvalues of the Laplacian on non-compact Riemannian surfaces of finite volume.</p>				
Course content/topics					
<ul style="list-style-type: none"> • Harmonic analysis on hyperbolic plane: hyperbolic coordinates, classification of isometries, eigenfunctions of the Laplace operator, invariant integral operators, Selberg/Harish-Chandra transform. • Fuchsian groups: definition of a Fuchsian group and its fundamental domain, classification of elements of Fuchsian groups, classification of Fuchsian groups, some special arithmetic Fuchsian groups. • Automorphic forms: definition, definition of a cusp form and Eisenstein series, Kloosterman sums and Fourier expansion of Eisenstein series. • Green's function on the upper half-plane and spectral expansion of the space of cusp forms (as Δ-invariant subspaces). • Automorphic Green function and analytic continuation of Eisenstein series. • Functional equation, poles and residues of Eisenstein series. • Spectral expansion of the space of incomplete Eisenstein series (as Δ-invariant subspaces). • The Selberg trace formula. • The Selberg zeta function, its basic properties and functional equation. • The Weyl law.
